

Applications

The only universal fit egress stair interruption gate that is ready for architectural approval and installation now. EgressGate solves the problem of designing, engineering, and fabricating one-off gates for stairways that extend past the level of exit discharge.

1. SINGLE SWING EGRESS GATES

- Built symmetrical to swing left or right-hand.
- Designed to adjust in width to eliminate custom fabrication.
- Fits openings 40" to 60" wide without modification.
- Easily modified on site to fit narrower openings.
- Easily mount to walls, posts, and railings. All needed hardware included.
- Hand-painted after install to match the railing color.
- Includes a Photoluminescent "No Exit" sign.

2. DOUBLE SWING EGRESS GATES

- Purchase two EgressGates for double swing applications.
- EgressGate is designed to self stop at the closed position.
- Swing speed is easily adjusted at the spring loaded hinge.

3. EASY ELECTROMAGNETIC HOLD RETROFIT

- Certain jurisdictions require egress gates to be tied to the fire alarm, self closing in the event of emergency.
- Speak to your fire alarm specialist to retrofit their preferred electromagnetic hold open to EgressGate.
- Metal stop plate provided to be modified to accept fire alarm hardware.
- Gate is held open, when the fire alarm is triggered, the hold is released and the gate springs allow the gate close.
