

## Benefits

Job site unfinished stairs create tripping hazards, causing slips and falls resulting in injury or death. Traditional methods of using wood or other materials to serve as a temporary stair tread is expensive. They are non-reusable, can become slick and unsafe, and must be maintained and inspected regularly for repair.

### MADE FOR CONSTRUCTION PROFESSIONALS

Designed to eliminate costs and create job site safety. Offering construction professionals and builders a quick solution for using unfinished stairs during the building phase as quickly as possible.

### MULTIPLE PROFILES TO FIT ANY STAIR DESIGN

Multiple profiles are available to fit the specific requirements of the stair design. For unique applications, we produce or modify our products to fit customer needs.

### ELIMINATE ON SITE CUTTING

Our product arrives cut to spec or modular product is designed to fit without any cutting. Since the temporary tread will be replaced with the finish tread later on, larger tolerances, gaps, and loose fit is acceptable.

### MINIMIZE INSTALL LABOR

Our product arrives ready to install. It is easily installed and removed and is lightweight by design. No regular inspection is required as it is highly durable.

### MINIMIZE JOB SITE INJURY

Our product was developed to offer the safest solution. It offers high visibility with contrasting stripes, a highly abrasive surface for non-slip, does not absorb liquid, highly durable and will not rot, and is easily cleaned with water and a brush.
