

Installation

Our Temporary Stair Treads have been developed to offer safe and low maintenance use of stairs during construction instantly. The solution arrives pre-verified to fit the stairs and cut to spec to eliminate on site labor. Installation and removal is fast. The product is reusable for future projects.

INSTALLATION IS PERFORMED BY ANY TRADE

Job site hand, carpenters, or ironworkers. No special tools are required as the product arrives ready to install for instant jobsite temporary stairs.

Installation:

- Verify no litter is in the metal stair pan.
- Set the bullnose / contrasting stripe into the metal stair pan.
- Allow the temporary tread to tilt into the pan.
- The contrasting stripe will be at the stair tread nosing.
- The non-slip will be face up.
- The ends are allowed to be short up to 1 inch each side.
- The elevation flush or above the metal nose.
- No adhesive or mechanical fasteners required.

Removal:

- Locate the removal hole.
- Use a crowbar or pliers, insert into the removal hole.
- Use leverage to tilt the temporary stair tread out of the metal stair pan.
- Stack for reuse.
