

Maintenance

TempTread and TreadX temporary stair treads have been developed to minimize the installation, inspection, maintenance, and replacement costs commonly associated with traditional wood infill treads. They are designed to last the duration of the construction phase, and often never need to be replaced during construction.

REGULAR ONSITE INSPECTION

1. Inspect for slickness created by job site conditions.
2. Inspect installed product for tripping hazards.
3. Clean or replace to resolve tripping hazards.

CARE AND CLEANING

1. Brush or blow off debris.
2. Wash with water as needed.
3. Pressure wash to restore.
4. Discard/replace if damage creates a tripping hazard.

STORAGE

1. Stack as much as the pallet allows.
2. Store covered from elements.
3. Store in ambient temperature / room temperature.
4. Keep away from heat sources.

EXCESSIVE DAMAGE

Discard / recycle products that are physically damaged or warn to avoid tripping hazards.
